MCI project   Second Milestone Plan

Team: 15

Project Title: Unmingle: boosting student diversity

Milestone 2	Activities	Projected Outputs
Define the second milestone to b completed by end of week 10	List activities required to achieve 2nd milestone	Define projected outputs from your work plan
1. Common functional modules (User module, Event module) complete the development and deploy, operate smoothly online. 2. Geography map site completes design and front-end development. 3. Geography map function completes back-end development and deploy, run smoothly online. 4. All back-end databases for the whole UniMingle website complete the development and maintain by periodicity. 5. Complete all pre-launch tests, including functions test and performance test. 6. Events function completed, initial events have been created, monitored and maintained by periodicity. 7. Initial UniMingle registered members maintenance. 8. Organize and collect all documents used and completed during preparation and development.	Complete debug of milestone 1's codes, then continue developing event module functions (create, modify and delete).	Developed function modules of UniMingle and running well online.
	Discuss and confirm the overall design of geography map function, including appearance design and interactive design.	Well-designed geography map appearance and reasonable interaction logic.
	Discuss and confirm the language and framework used in developing geography map as well as specific technology needed to be used during development.	Developed geography map function and running well to be used.
	Inspect and evaluate all databases had set up if they are adequate to satisfy the requirements of further development and extension of UniMingle.	Organized databases for daily operation and maintenance of UniMingle.
	Conduct internal testing in terms of front-end and back-end, all functions needed to be tested and all contents needed to be confirmed before going up formally line.	UniMingle passed all tests in terms of functions and performance before launch officially.
	Discuss and confirm the first line of events on UniMingle, then complete posters design, copy writing and labelling.	Various and well-prepared events launched and displayed on UniMingle event module.
	Invite a certain number of people to register as a member of UniMingle, then launch events on a continuous basis.	Multifarious events provided by official or other members aperiodically.
	Inspect all documents that submitted to official GitHub, sort them in order to present a clear development process.	Concerned documents (plans/agendas/minutes/report) are all in readiness, clearly demonstrate the whole development process.
